## **JP231 Rath Bb Trombone specification**

### **Model**

JP231RATH

### **Finish**

High quality lacquer finish.

### **Body**

High grade brass

### **Features**

The JP231RATH features many elements designed by Michael Rath who has long been regarded as a world-renowned maker of professional trombones.

Michael spent considerable time at the factory and the bells and slides are made in exactly the same way as his own professional instruments. It also incorporates his own leadpipe design, which contributes a great deal to the high performance level offered by his instrument.

The bore is .525 and falls into the 'medium large' group. It has an 8" bell

### **Accessories and maintenance**

The trombone is supplied with a mouthpiece, which is designed to be versatile and offer the player a good response and dynamic/tonal range, neither too deep nor too shallow. Many players will customise their instrument with their own choice of mouthpiece, which adheres to their specific playing requirements. The trombone comes with slide lubricant to complete the outfit and help you to maintain the instrument.

### **Case**

The case is smart, lightweight and strong. It comes with backpack straps, shoulder straps and carrying handles for convenience and security.
